

SAQ Formats

Drive Sustainability members encourage their business partners to conduct compliance assessments of their own supplier base in order to cascade sustainability principles along the whole supply chain.

To conduct such assessment using the common criteria, Drive Sustainability has developed The Self-Assessment Questionnaire for the automotive suppliers on CSR/Sustainability (SAQ) that is designed to be used not only by the OEM partners, but by any automotive tier-1 supplier that are willing to assess their own supply chain.

There are two ways how the SAQ is made available for use to the automotive suppliers: digital (through an interactive platform) and physical (through xls/pdf files downloadable via Drive Sustainability website). Please note that all the OEM partners of Drive Sustainability collect the SAQs from their suppliers digitally.

DIGITAL SAQ

Where can I find it?

The digital SAQ is made available to the automotive suppliers via Supplier Assurance platform, (supplierassurance.com), delivered by NQC. NQC has been the chosen provider of the majority* of Drive Sustainability partners for the delivery of a digital SAQ for the last 6 years.

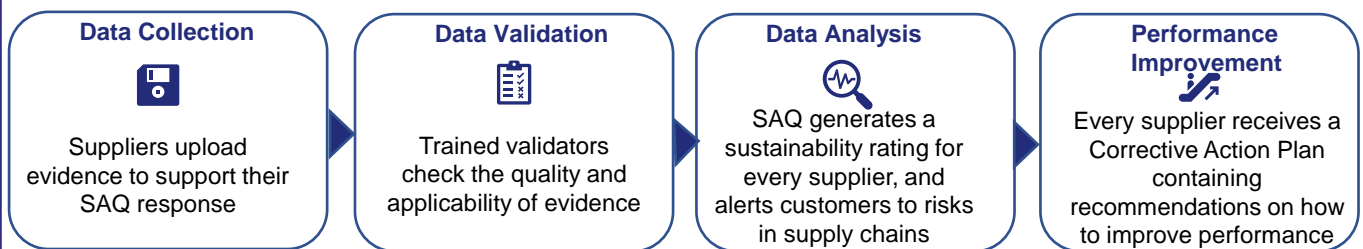

How can I use it?

The platform digitises the end to end process, collecting and validating supplier sustainability evidence as part of the process. A range of languages are supported both within the Platform and through global multi-lingual Support Centre.

Benefits of Using the Platform

- *Structured Engagement* – the Platform enables you to invite thousands of suppliers to complete the SAQ even if you have limited resources to manage a programme.
- *Improved Response Rates* – the Platform already has over 60,000 completed SAQs and it is easy for a supplier to share their data so you can access existing SAQs quickly.
- *Comprehensive Analysis* – the Platform allows you to review an individual supplier's scores and create bespoke queries and analysis relating to groups/categories of suppliers.
- *Performance Monitoring* – the Platform and the SAQ allows you to baseline the performance of your supply base and then measure/track the improvement over time.
- *Innovative Commercial Model* – NQC offer a unique shared cost model for buying organisations that use the Supplier Assurance Platform.
